Ahmedabad, Gujarat, India

SUMMARY

Passionate Full Stack Web Developer with expertise in Generative AI, JavaScript, Python, and the MERN stack. Proven track record at GFuture Tech with an Employee of the Month award, strong project experience, and skills in technical interviews.

EXPERIENCE

• GFuture Tech Pvt.Ltd

Feb 2024 - June 2024

React.js Developer

Ahmedabad, India

- Earned Employee of the Month within 2 months for exceptional performance
- Built and deployed full-stack apps using MERN Stack, React.js, and Python
- Automated tasks and performed web scraping using Python and AI tools
- Worked on AI/ML projects and contributed to external backend development
- Debugged and improved a pre-built Python backend, resolving multiple issues
- Deployed live applications and managed server-side configurations
- Conducted technical interviews for developer hiring

• Freelancing

Dec 2024 - March 2025

Software Developer

Remote

- Built frontend for a Fast Food App using React.js, translating Figma designs into responsive UI
- Integrated backend APIs and implemented login features for admin and users
- Developed a Python script to automate product posting on Facebook Marketplace
- Managed project delivery and client communication independently

EDUCATION

• Full Stack Web Development(Full Time)

Jan 2023 - Jan 2024

Masai School

Ahmedabad, India

• Bachelor of Computer Applications

June 2019 - May 2022

Gujarat Law Society University

Ahmedabad, India

SKILLS AND TOOLS

Python | Flask | Selenium | PyGUI | Django | AI-ML | HTML5 | CSS | JavaScript | MongoDB | Express.js | RESTful API | React.js | Node.js | TailwindCSS | ChakraUI | Firebase | Git | GitHub | Redux | Cypress | Postman | Android Studio | Figma | Jira | Agile Scrum Methodologies

PROJECTS

• COTDS

Tech Stack: Next.js | TailwindCSS | TypeScript | Flask | Python | PostgreSQL

- Quickly understood a pre-built enterprise-level project and became productive within hours
- Fixed existing bugs and implemented new features and API endpoints
- Updated Excel data parsing logic and enabled Excel file generation and delivery from the server
- Designed and integrated PDF templates in Next.js to display structured data
- Resolved backend and database-level issues to improve performance
- Collaborated with the team lead and developers to ensure smooth project workflow

• Recipe Swap

Tech Stack: React.js | ChakraUI | Express | MongoDB | Node.js | Chart.js

- Led the team as Project Leader, responsible for finalizing the tech stack and distributing tasks among team members
- Developed the backend using Node.js and Express, building secure API endpoints and a complete auth system for user and admin login
- Utilized MongoDB with Mongoose for database operations and data management
- Designed and implemented the Admin UI in React.js, including full CRUD functionality
- Integrated Chart.js for real-time analytics and data visualization

- **BlogGTP | Automation**

Tech Stack: Python | PyAutoGUI | openpyxl | Selenium

- Developed a fully automated system to generate and deploy blogs using data from Excel files and ChatGPT
- Initially used Selenium, but switched to PyAutoGUI to overcome browser control limitations
- Read structured data from Excel using openpyxl, then automated screen interactions to generate blogs via ChatGPT
- Converted generated content into HTML drafts using VS Code, then transferred files to the server for deployment
- Streamlined the entire process—from content generation to server upload—without manual intervention
